

Delivery

TECHwize Solution assessments can be delivered online through a browser interface either in-house or at off-site locations. Each test administration requires a proctored environment. The testing engine behind TECHwize Solution is *Questionmark Perception*, the leader in assessment solutions.

Content

Each assessment currently consists of 60 items drawn from a bank of over 600 items that were written by knowledge leaders using nationally validated skill standards as a blueprint. The National Information Communication Technology (ICT) Skill Standards were developed by industry leaders including HP, Lucent, AT&T, Novell, Microsoft, and more...

These 600 items have been reviewed by item writing experts resulting in a comprehensive item bank measuring various topics and difficulty levels.

The assessments are designed to support organizations that leverage Information and Communication Technologies as well as those facing systems integration & convergence challenges and are developed using non-product specific material. Each test item assesses knowledge and skills (Server & Storage Devices, Operating System Maintenance etc.) related to critical work functions (Install & Upgrade PC & Network Device Hardware); see an example below.

DEVICEwize

Network Device Assessment

Use for job roles such as...

- **Technical Support Technicians**
- **Help Desk Technicians**
- **Computer Technicians**

Install & Upgrade PC and Network Device Hardware				
Network Device Backup & Recovery	Network Device Connectivity Components	Operating System Maintenance	Servers & Storage Devices	Input & Output Devices

The DEVICEwize Assessment...

- Adapts and integrates with existing assessment requirements;
- Keeps pace with changing industry and economic needs;
- Ensures Quality Control (eg Item analysis, SME review);
- Links items in Item Bank to national skill standards;
- Provides valid and legally defensible content ;
- Targets training needs more effectively;
- Decreases training costs.
